Quick Coupler Groove Clamp

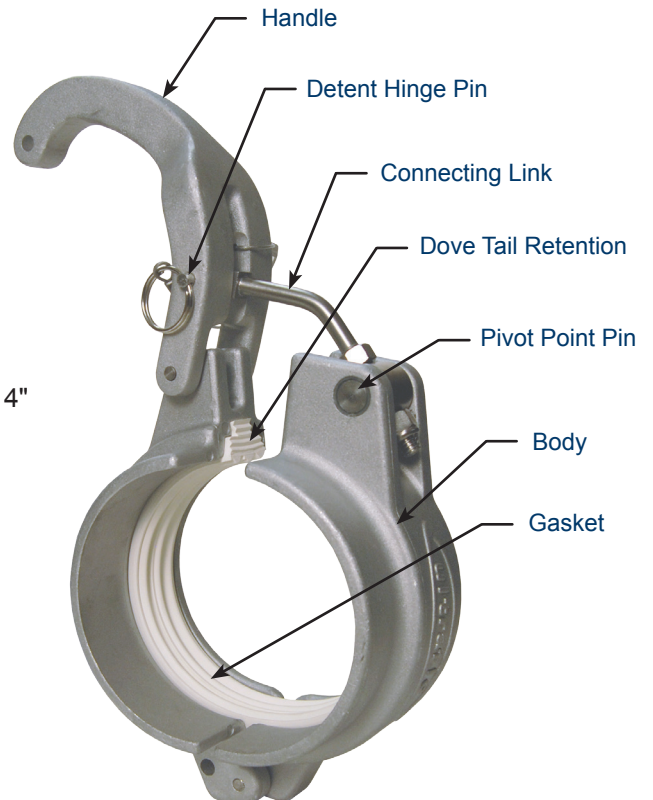

Split Gasket Ultra Pipe Quick Coupler!

Fast Installation, Strong Construction

Features:

- compact lightweight design
- simple adjustment
- secure seal free of voids
- easy, fast installation
- available in 4" groove to groove or 4" groove to plain configurations
- pressure tested to **65 PSI**

One Person Installation

The Quick Coupler Groove Clamp is designed for easy installation. The split gasket is secured to the clamp by a dovetail retention feature and the connection link keeps the body halves attached in the open position. These features simplify the installation and replacement processes and result in significant savings in time and effort.

Accepts Standard Circular Gaskets

The clamp can be fully opened by simply removing the captive dentent hinge pin. When fully opened, the Quick Coupler Groove Clamp will accept industry standard gaskets.

Lightweight / Heavy Duty

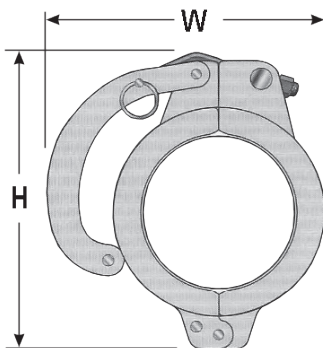

The clamp is made from A356-T6 aluminum with 304 stainless steel hardware for durability and excellent corrosion resistance. The heavy-duty handle features two connection points to the body. In addition, the handle is designed with ergonomics in mind. A wide profile provides a broad base for applying both opening and closing pressure. The wide open design easily accommodates gloved hands and eliminates pinch points. Bushings at all pivot points prevent freeze up.

When piping variations make clamp adjustment necessary, connecting link tension is easily field adjusted without the need for special tools.

Void-Free Gasket

To prevent contamination build up, the Quick Coupler Groove Clamp gasket design is free of void areas when installed. The gasket ends are extended to compress together when the coupler is closed forming a positive leak-free seal.

Note: All gaskets are Food Grade White Nitrile.

Part Number	Size	Configuration	H	W
04901701	4"	groove to groove	8.00	7.25
04902701	4"	groove to plain	8.00	7.25
